MY STAY IN SLOVAKIA

After a couple of hours with traveling, we finally arrived Bratislava. Filled with excitement and joy, I was ready to explore a new country.

We arrived late that day. After unpacking our belongings, we headed out. Little did we know about the country and its treasure. Since it was dark, it was hard to observe and explore the city. But it didn't stop us. Me and some students walked and walked. Amazed by the nightlife, and we could only imagine how beautiful the city was in day light.

The next day started with visiting the school we were supposed to attend for a week. A teacher, from the school Gamca, walked with us. I was actually surprised by how cold and windy it was, and I were thrilled to finally see the school and catch some hot air. The school building was very old, but pretty. After listening to some presentation, it was finally time for sightseeing.

As much as I wanted to explore more of the city during my stay in Bratislava, we had to attend classes. This trip was meant for physic and math students, therefore did we attend both physic and math classes. We could also choose to attend other classes, which I chose.

They arranged a competition, which they called the Olympic Games, where they had competitions within different genre, such as sports, music, art and etc. And luckily we had an opportunity to join them during our stay.

I am more than happy and satisfied with this trip. This trip was actually more than I had expected. It was very interesting, educative and I had a lot of fun. A trip to Bratislava, which I guess I will never forget.

What did I like the most...
The thing I liked the most was obviously exploring the city. Especially the old city. It was so beautiful and majestic. I could walk for hours, and I would not get tired.

The most interesting was...
Architecture in Bratislava was incredible. It was unique.

The biggest difference was...
Compared to Norway, the Slovakian prices were some how different. It was so much cheaper. I discussed with some Slovakian students about their salary, or an average salary for a student, and both "sides" were shocked about the difference.

The biggest surprise was…
The Slovak students were shocked when they heard that we did not have any activity with each other after school, like them.
