MY STAY IN NORWAY

The thing I liked the most about our mobility was the level of the educational institution. All the facilities that the school is well equiped and offers the best conditions for learning.

The most interesting was the fact that all the students in the school has a choice of whether to concentrate on a specific field while studying or to choose the way of optaining the more general education whitout any specifications.

The biggest difference between Norway and Slovakia is the quality of life. It seems like people in Norway have less problems than people in Slovakia. Also big difference between the school institutions in Norway and in Slovakia is that, the schools in Norway do not offer any extra curricural activities like they do in Slovakia.

The biggest surprise of my stay in Norway was the high prices of goods and services all across Norway. On the other hand, a very positive surprise was the chastity in Drammen but also in the capital Oslo.

We arrived to Oslo in the evening after 2 hours long flight from Prague. However we got to Drammen after another one hour of travelling by train. Right after we arrived we were surprised, that even though it was 10 PM there was still light. During the next few days we explored Drammen, visited a lot of places in Oslo and we were also in silver mine. Our school week began on Tuesday. During the first day of the school week we got introduced to the school of St. Hallvard near Drammen. They took us on a short tour around the whole school and we presented our school in form of a short presentation. After this welcome ceremony we have experienced a sport workshop. I was amazed by the size of their sport facilities. We played football , floorball and beach volleyball. After a sport workshop we had a political workshop, where we compared the political system of Slovakia and Norway. On the next day we were devided in two groups each composed of 15 Slovakian students and 15 Norwegian students and we had the math workshop and then cultural workshop. In math workshop we solved some math problems and then we compared the use of math in different fields. In my opinion the cultural workshop was the most interesting because we have learned a lot about their culture and we also tasted their traditional food. The next day we had English workshop which was closely conected with history of both nations. The last day the musicians prepared a goodbye concert for us and we also prepared a short performance for them. At the end of our mobility we ate waffles, which they prepared for us and then we had to say goodbye to our Norwegian friends. This mobility was great experience for me because I have learned a lot about different culture and school system, different food and also about different student life, graduations and traditions. During my stay in Norway I have improved my English skills and I have broken the speaking barrier, that I had before.
